(57) Abstract:

PROBLEM TO BE SOLVED: To solve a problem that a third person who desires to receive transmission of digital data (such as letters, maps, photographs) can receive it only at a place where an Internet terminal is placed in the conventional use environment of a cellular phone.

SOLUTION: When the digital data is transmitted from the present cellular phone, the digital data is directly transmitted to an Internet information receiving terminal of a print station, a necessary part of the digital data is outputted, printed or viewed on a screen of the Internet information receiving terminal. In addition, in one or more print stations to temporarily store the digital data in a free space of a subscribed document server and to be connected with the document server by the Internet, the necessary part of the digital data stored in the document server is outputted, printed or

viewed on the screen of the Internet information receiving terminal.
